

LUMERIS ACCOUNTABLE DELIVERY SYSTEM PLATFORM

The transformative Accountable Delivery System Platform (ADSP)[®] is the core technology behind Lumeris' technology-enabled solutions. The ADSP was purpose-built for population health management and has proven successful in the Lumeris-operated Medicare Advantage plan, as well as with health systems, payers and providers across the country.

The cloud-based ADSP is an integrated control system for accountable care, allowing providers, key accountable delivery system executives and their staffs access to critical clinical and financial information. This enables timely, value-based health care decisions that accomplish the Triple Aim *Plus One*: better health outcomes, lower costs and improved patient *plus* physician satisfaction.

ADSP:

- Aggregates and analyzes data from across the continuum of care — including EMR encounter data, claims, pharmacy/lab, and other data — and stores it in the Lumeris data warehouse
- Rationalizes data to establish a unified, accurate view of patient care and population health
- Mines data for clinical and financial improvement opportunities
- Sends actionable clinical and financial intelligence to providers and other decision makers, providing complete visibility into the patterns and behaviors that drive costs and impact outcomes

ADSP Tools, Reports/Analytics and Workflows support health systems, payers and providers in their transition to population health management and help them manage quality, cost and utilization metrics as part of any value-based contract.

Printed	Primary Provider	Location	Intervention Count	Reason for Intervention(s)

Diabetes and Risk Factor (10-15 years old)	1
Adults with Diabetes (10-15 years old)	1
Diabetes and Risk Factor (10-15 years old)	1
Diabetes, A1C > 9	1
Diabetes, A1C > 9	1
Diabetes, A1C > 9	1
Diabetes, A1C > 9	1
Diabetes, A1C > 9	1
Diabetes, A1C > 9	1
Diabetes, A1C > 9	1
Diabetes, A1C > 9	1
Diabetes, A1C > 9	1

Patient Worklist

Stratifies patient populations by needed interventions, outreach score and disease state by physician or facility

Patient Care Profile

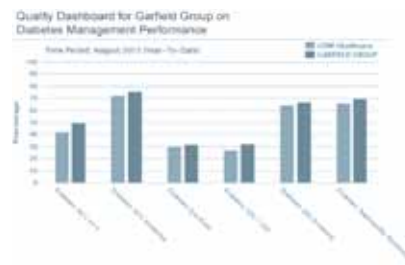

Provides patient-level risk score and complete clinical and claims information to identify gaps in care

Measure Summary Table

Displays quality performance measures as compared to system and market benchmarks

Content Library	Site Description
1. Basic Coding and Documentation	This document provides a detailed overview of the basic coding and documentation process.
2. Advanced Coding and Documentation	This document provides a detailed overview of the advanced coding and documentation process.
